1(created a ubuntu server)

Hello, World!

This is a simple Apache web page.
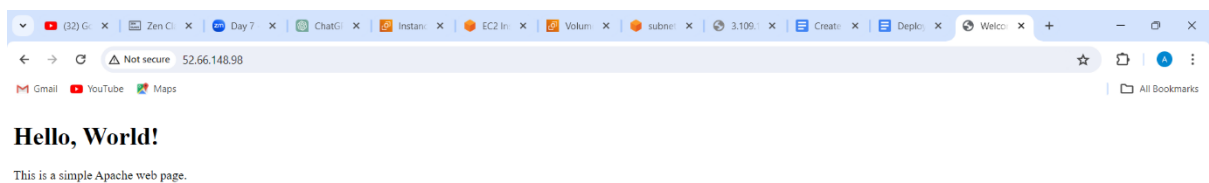

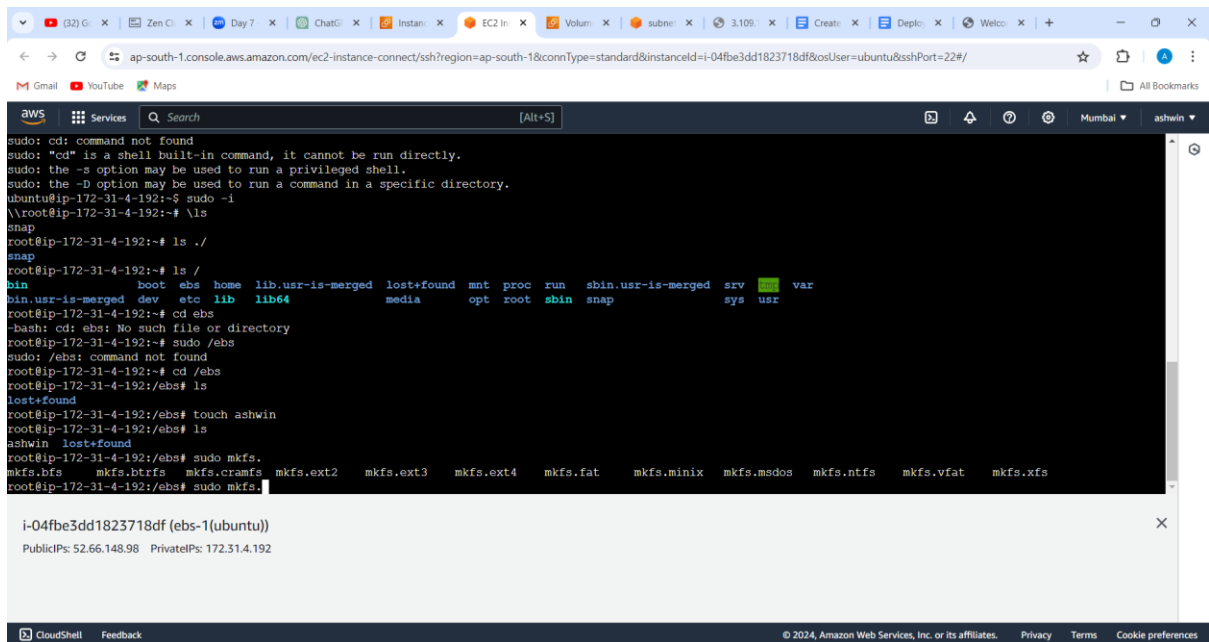

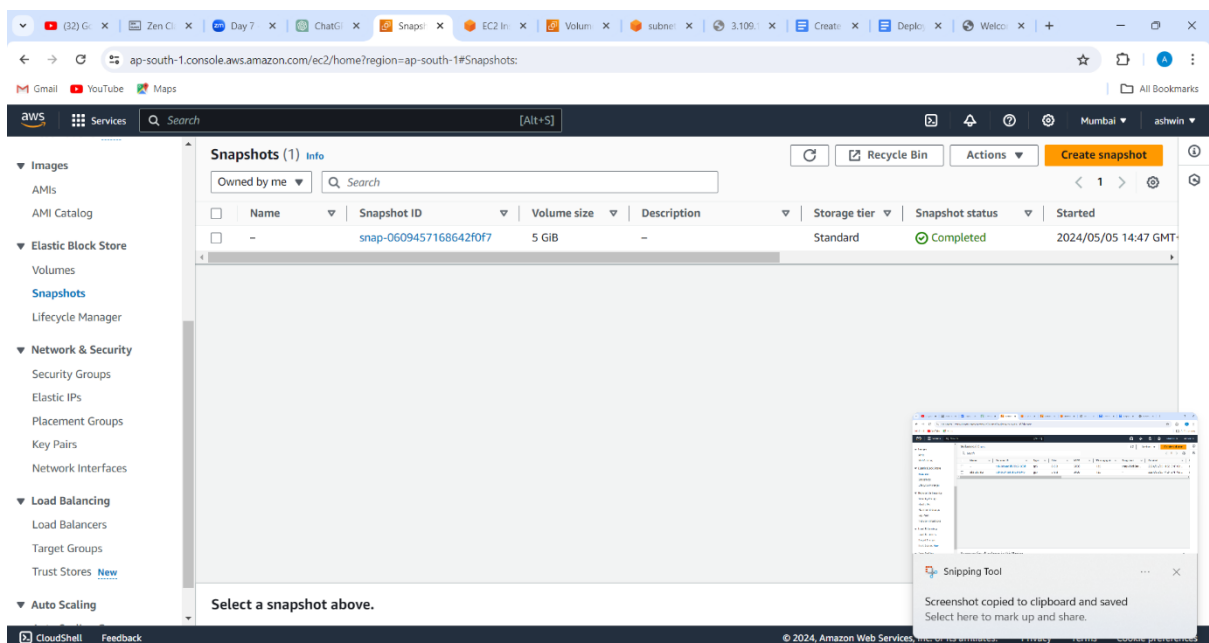

2(with apache)
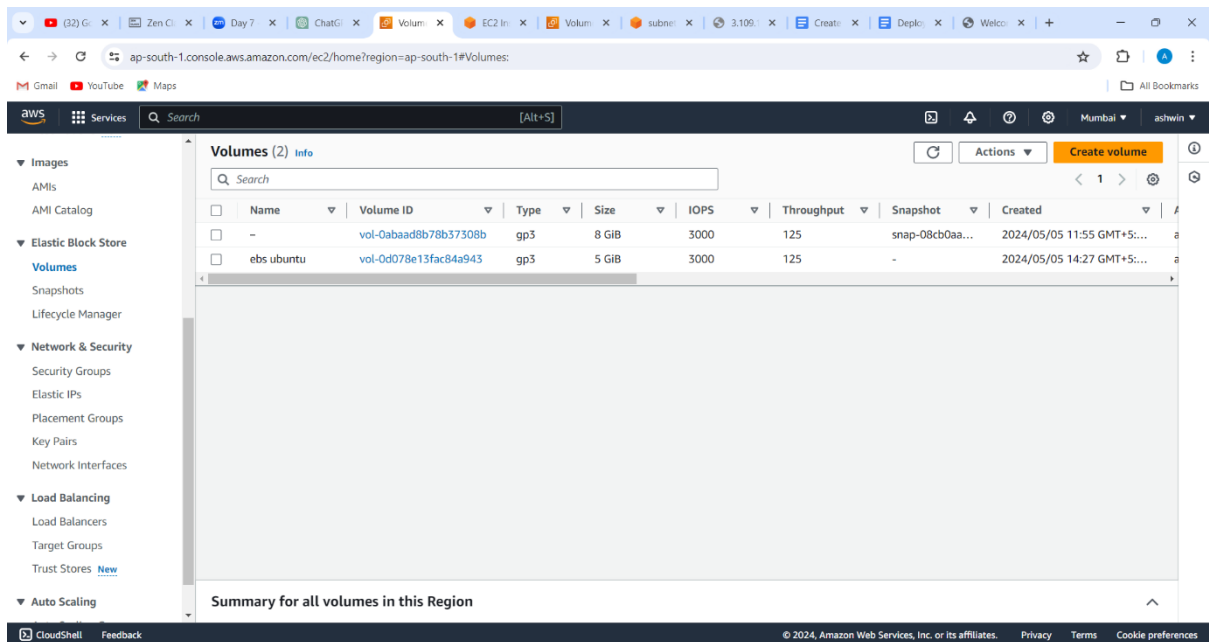

3(created a volume)
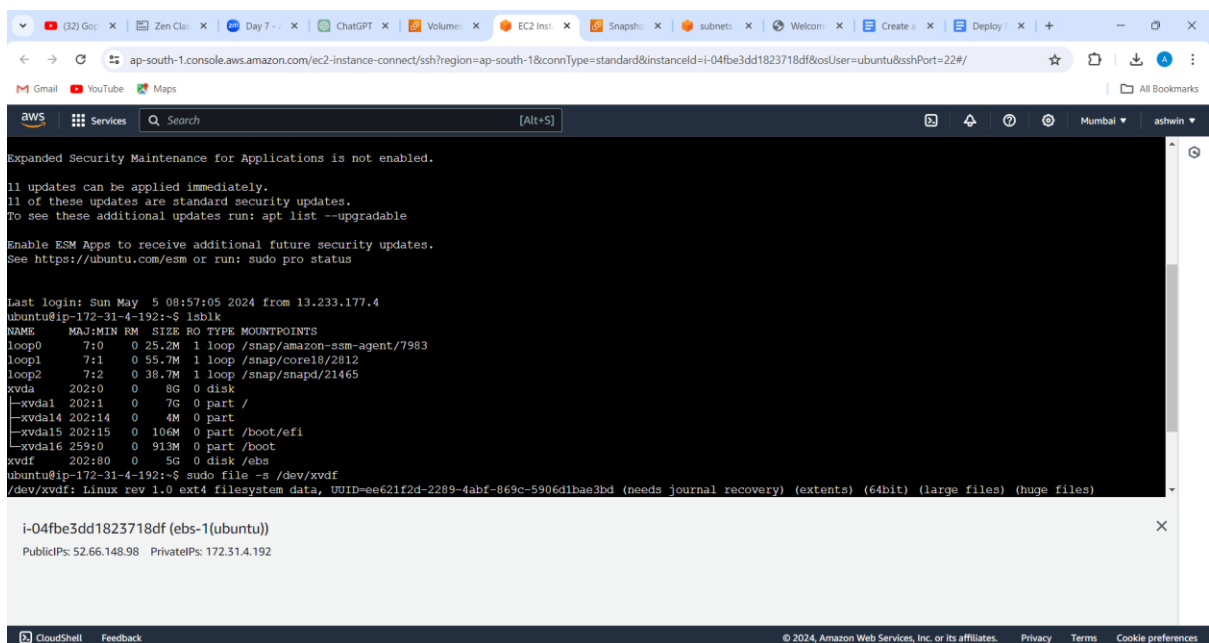

4(configured xvdf and created ebs folder in root and mounted it)

5(created a file in ebs folder)

6(taken a snapshot of the volume in mumbai region)

7(copied the snapshot to sydney region)

8(created a volume through snapshot)
